SITE HSE SUPPORT

DRILLING & WORKOVER OPERATIONS SUPPORT

The day-to-day tasks of the Drilling HSE Specialists will be diverse due to the nature of each project but shall be in-line with the company's HSE requirements and may include but will not be limited to:

-  Provide HSE support to drilling operations and support Drilling Contractor management by assessing site-specific risks associated with Drilling Operations at assignment site.
-  Ensure implementation of and compliance with, all applicable company HSE standards policies and procedures, national regulations and local and international industry standards.
-  Ensure contractors comply with all Site HSE requirements. Prepare HSE Management System "Bridging Document" with drilling rig contractor.
-  Ensure Implementation of Company HSE plans and project procedures, including waste management.
-  Support Contractor management by assessing site-specific risks associated with all operational activities.
-  Ensure adequate H2S management plans & equipment are in place if and when required.
-  Ensure rig crew and contractor personnel are familiar with site emergency response plan and participate in regular site drills.
-  Conduct site well control and Emergency drills.
